# About Gene Gendel and KSTS Consulting

**Gene Gendel** is an organizational design consultant, adaptive & lean coach and trainer, and independent adviser to senior leadership. Gene is a widely recognized, world-class trainer/instructor, and is mainly focused on organizational design and product centricity, the experience for which he has gained, over the decades of deeply embedded coaching and consulting. Gene's [clients](#) represent a wide industry spectrum. Almost 15 of 20+ years of his professional experience Gene has dedicated to working with companies of various sizes and lines of business, trying to help them improve internal dynamics, organizational structure and becoming a better place for people to work in. Gene engages at *all* organizational levels: senior- and mid-level management, teams and individuals. In his work, Gene uses various methods, tools and techniques to amplify learning of other people and to ensure that his followers gain autonomy after Gene “coaches himself out of the job”. Over the last decade, Gene’s big focus has been on large financial institutions and consulting companies that struggle with moving away, from traditional budgets and portfolio/program/project work decomposition, towards more adaptive/flexible budgeting and better clearly products (product-centric, customer-focused development).

Gene is the co-founder of **KSTS Consulting**, *the only company in the United States that has the credential of a [Certified LeSS Coaching Company](#)*. Gene’s, highly in-demand LeSS [classes](#), both private and public, are based on advanced system modelling and rich exosystemic perspective that includes intra-organizational dynamics and market realities.

# About Us

*Your choice of partnership matters*

## One Stop-Shop For:

- ❖ Organizational and team structure and dynamics
- ❖ Executive coaching and consulting
- ❖ Individual, single team and multi-team coaching
- ❖ Upskilling Scrum Masters and Product Owners
- ❖ HR advisory: building talent and defining careers
- ❖ Training: Agile, Kanban, Scrum, Large Scale Scrum
- ❖ Workshops: product discovery & business agility
- ❖ "SAFe Recovery" Program (gradual improvements)
- ❖ Complimentary lunch & learn sessions

# Alternatives to “Skillful” Dependency Management

we care about

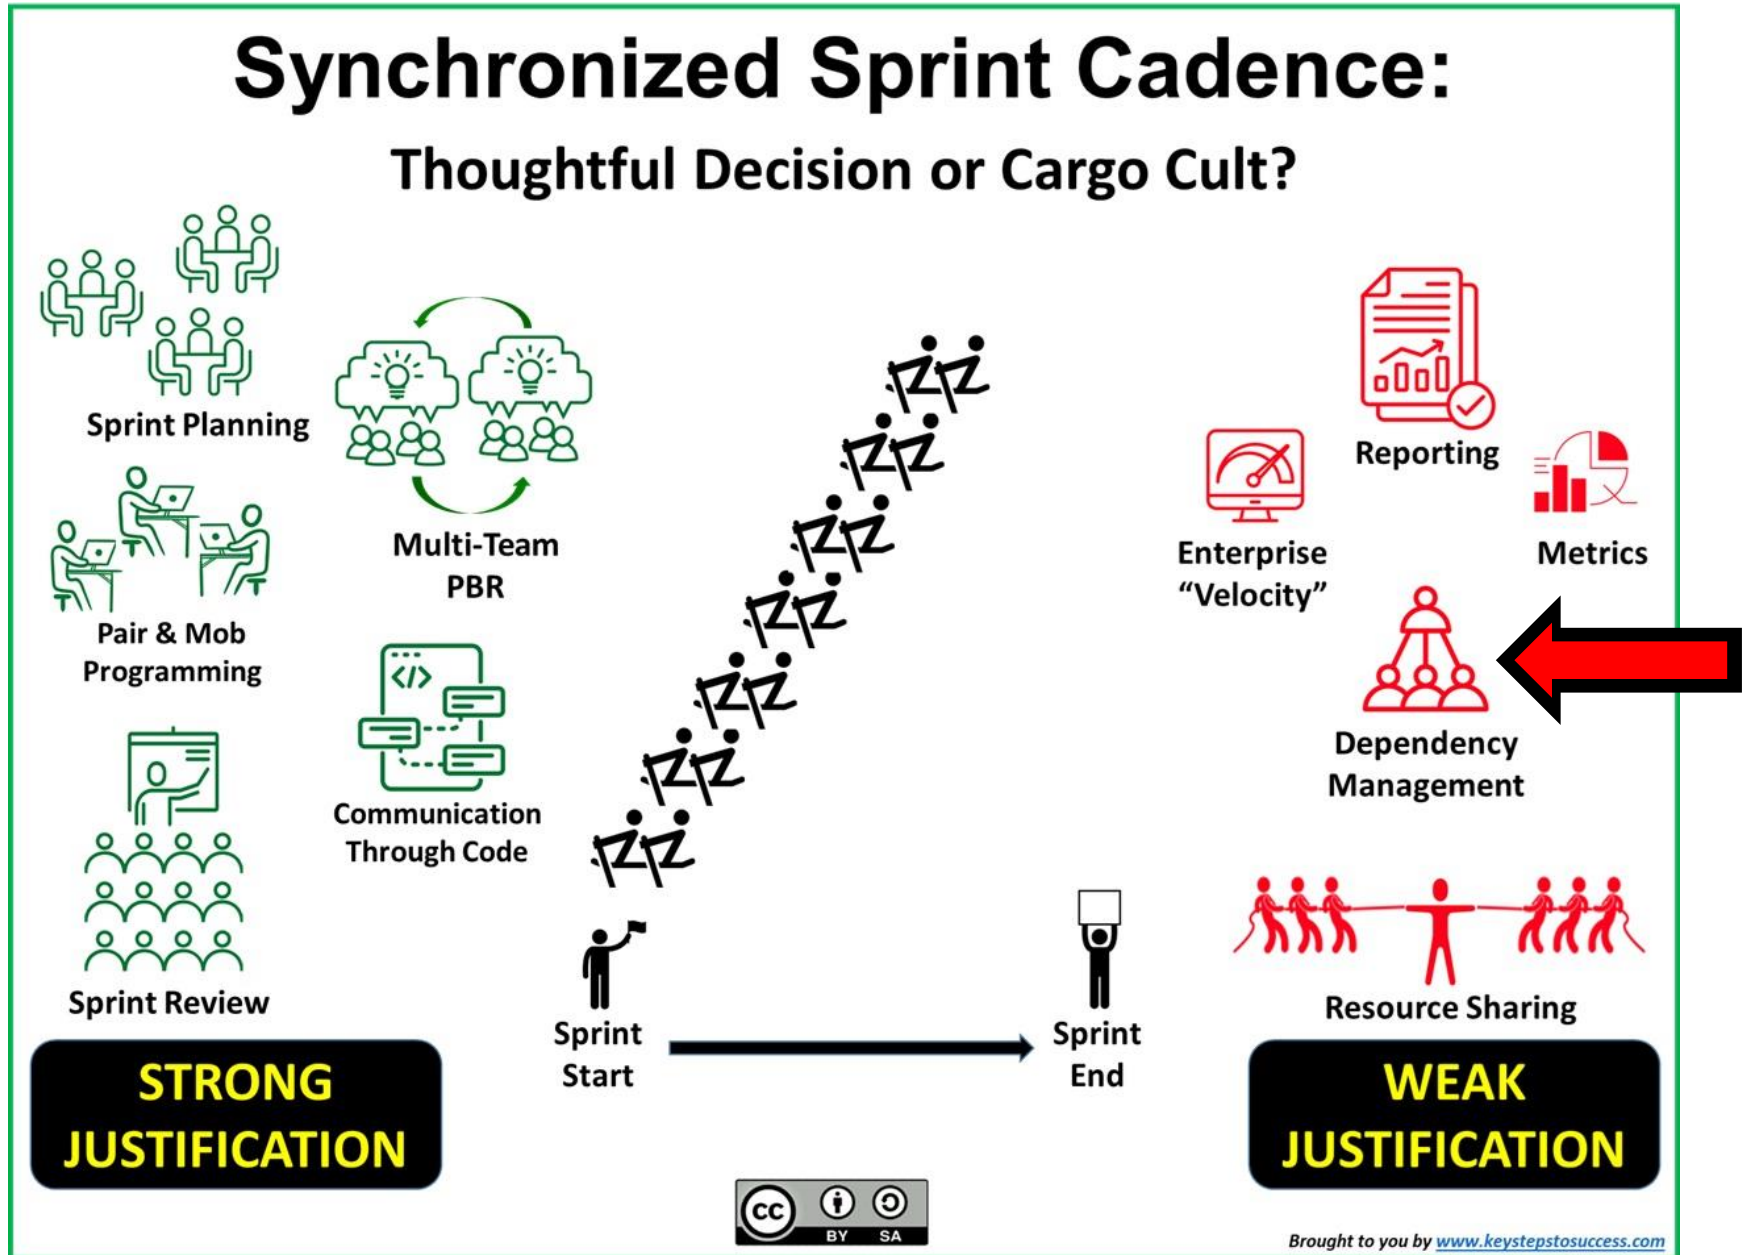

no so much

In programming, synchronous dependencies mean that one operation must complete before the next can start, while asynchronous dependencies allow multiple operations to run concurrently. Synchronous execution is a blocking architecture, where each operation waits for a response before proceeding, while asynchronous execution is non-blocking, allowing tasks to run simultaneously. 

# Alternatives to “Skillful” Dependency Management

## Synchronized Sprint Cadence:

Thoughtful Decision or Cargo Cult?

# Alternatives to “Skillful” Dependency Management

## Cross-Team Work Synchronous Dependencies

# Alternatives to “Skillful” Dependency Management

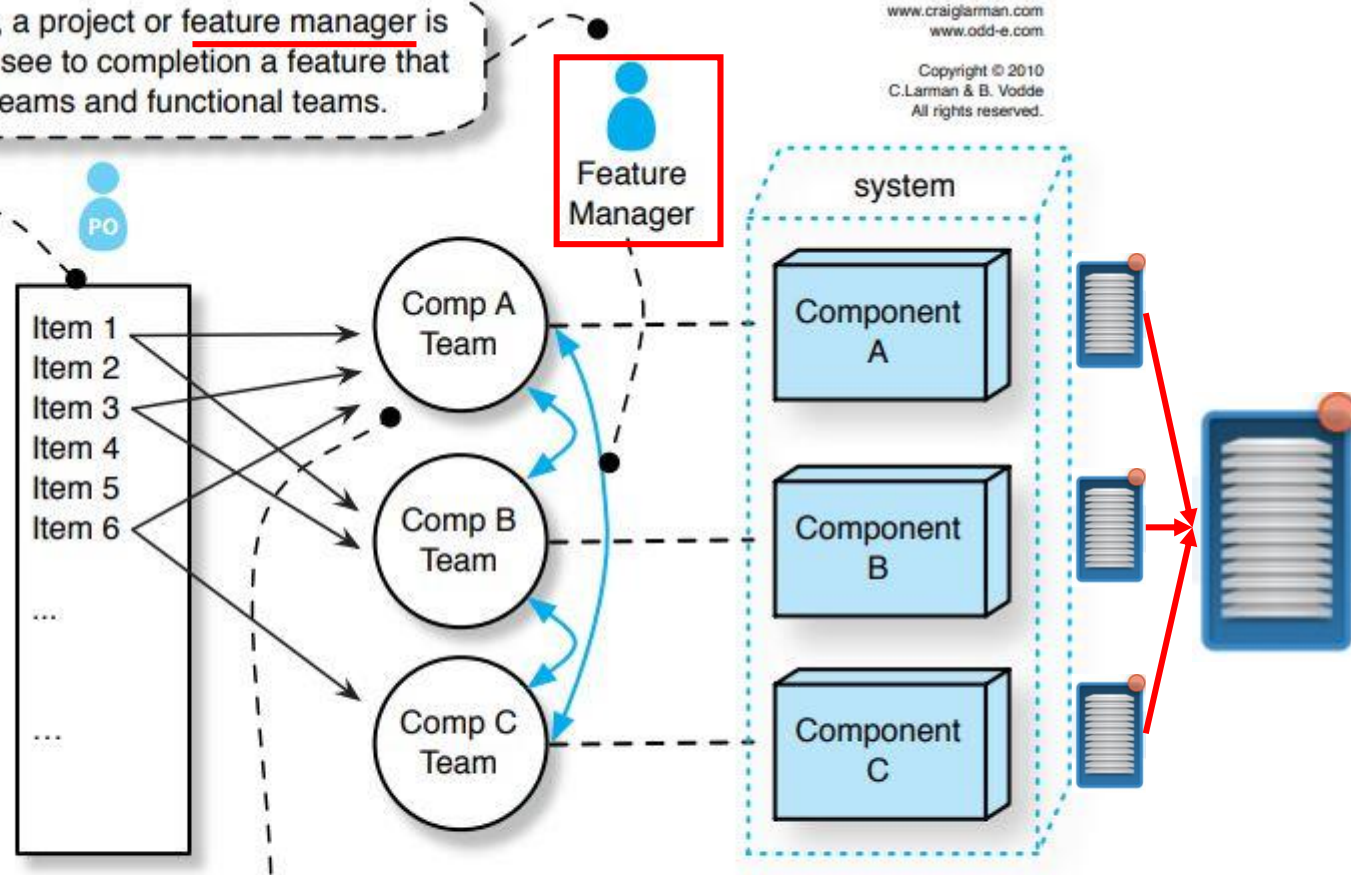

With component teams, a project or feature manager is used to coordinate and see to completion a feature that spans component teams and functional teams.

With component teams, there is a tendency to select goals familiar or ‘fast’ for teams, not for maximizing customer value. For example, Component B Team does part of Item 3 because it mostly involves Component B work.

This is the “watching the runner rather than following the baton” local optimization.

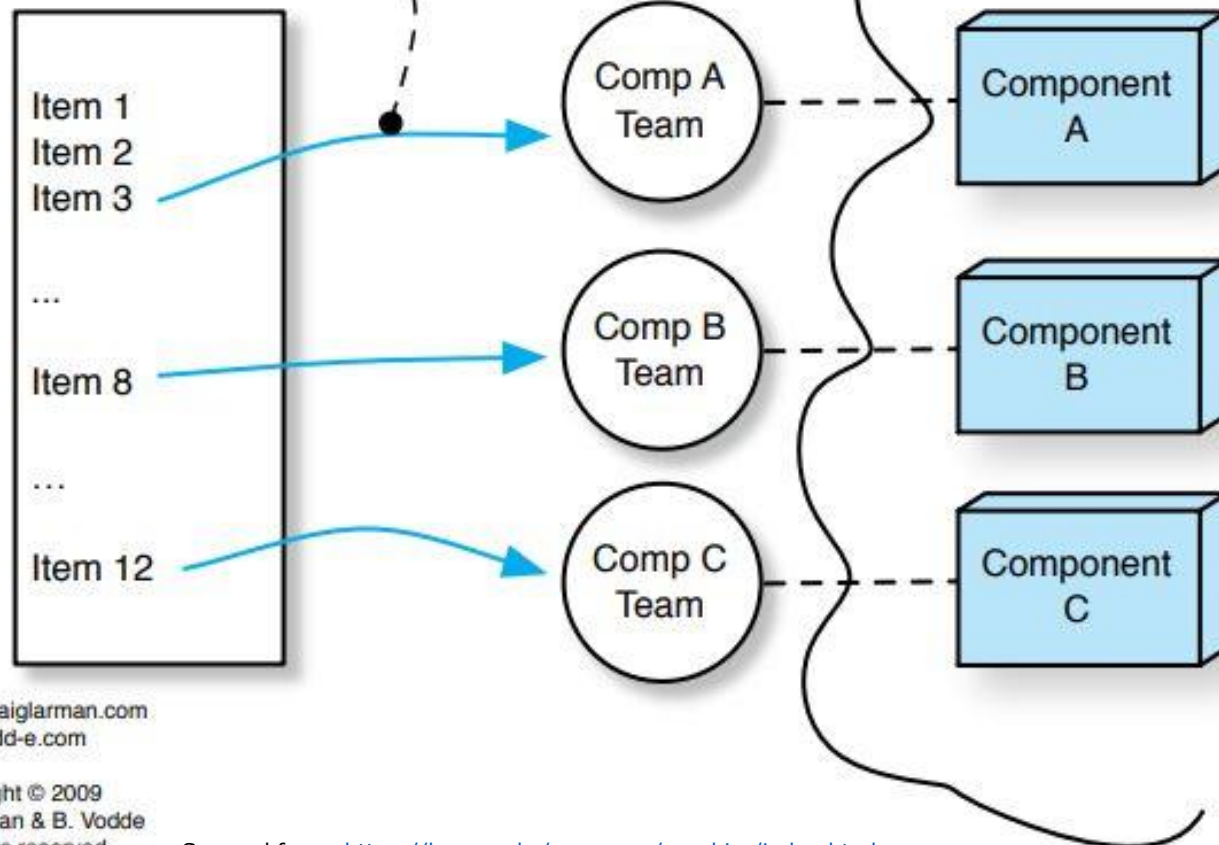

With component teams, there is increased delay, as one customer feature is split across multiple component teams for programming, and eventually transferred to a separate testing team for verification. There is handoff waste, and multitasking waste—as one component team may work on several features in parallel, in addition to handling defects related to ‘their’ component.

# Alternatives to “Skillful” Dependency Management

With feature teams, teams can always work on the highest-value features, there is less delay for delivering value, and coordination issues shift toward the shared code rather than coordination through upfront planning, delayed work, and handoff. In the 1960s and 70s this code coordination was awkward due to weak tools and practices. Modern open-source tools and practices such as TDD and continuous integration make this coordination relatively simple.

System Optimization

# Alternatives to “Skillful” Dependency Management

*Synchronous Dependencies: from HARD to SOFT*

# Alternatives to “Skillful” Dependency Management

*Synchronous Dependencies: from HARD to SOFT*

**I-shaped** → **T-shaped** → **M-shaped**

# Alternatives to “Skillful” Dependency Management

**Synchronous Dependencies: from VERY HARD to HARD to SOFT**

## Explicit (Visible) vs. Implicit (Hidden) Hand-Offs

**Functional Teams**  
*made of*  
**I-shaped developers**

- Cross-team dependencies
- Explicit hand-offs
- Very long Cycle Time
- High integration risks
- Low learning opportunities

**very HARD**

**Cross-Functional Team**  
*made of*  
**I-shaped developers**

- Intra-team dependencies
- Implicit hand-offs
- Shorter Cycle Time
- Lower integration risks
- Higher learning opportunities

**HARD**

**Cross-Functional Team**  
*made of*  
**T-shaped developers**

- No hard dependencies
- No hand-offs
- Shortest Cycle Time
- Lowest integration risks
- Highest learning opportunities

**SOFT**

# Alternatives to “Skillful” Dependency Management

$$N = \frac{n \times (n-1)}{2}$$

**n - number of communication nodes**

**N – number of communication channels**

# Alternatives to “Skillful” Dependency Management

- A **cross-functional team** is a group of people with different skills and expertise who work together to achieve a *common goal*.
- A **cross-functional developer** is a member of a cross-functional team, which is a group of people with diverse skills working together to achieve a *common goal*.
- A **full-stack team** is a group of developers who work together to create a *software product* from start to finish, including both the front-end and back-end.
- A **full-stack developer** is a programmer who works on all aspects of software *product* development, from front-end to back-end.

# Alternatives to “Skillful” Dependency Management

## False Equivalency Kills Innovation

**\$450,000 NOT** spent on  
education and cross-  
training of developers

**\$50M LOST** in market  
opportunities, to  
competitors

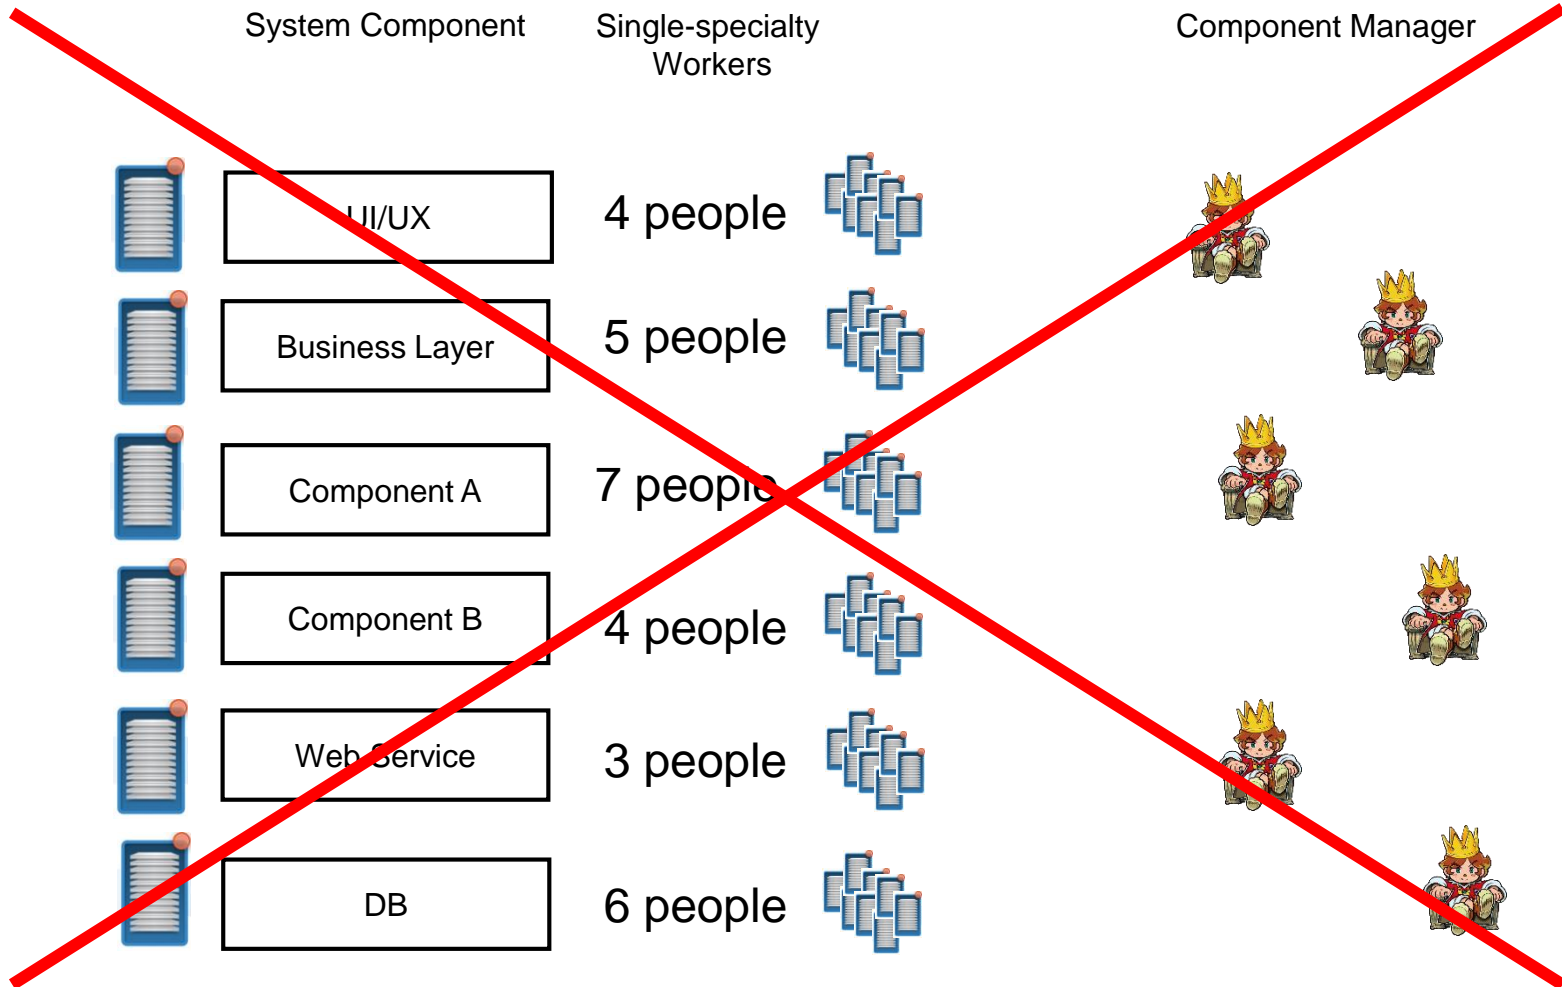

*...such a weak argument and poor judgement by a manager...*

**BIG IDEA:** stop being penny-wise and near-sighted, when making long-term organizational design decisions
